## MODULE HANDBOOK

Module name	Topics in Algebra C												
Module level, if applicable	Magister												
Code, if applicable	MMM-6213												
Subtitle, if applicable	Max Plus Algebra												
Courses, if applicable	Kapita Selektta Aljabar C (Aljabar Max Plus)												
Semester(s) in which the module is taught	1st (first) or 3 <sup>rd</sup> (third)												
Person responsible for the module	Head of Algebra Research Group												
Lecturer	Dr. Ari Suparwanto, Dr. Diah Yunia Eksi Palupi												
Language	Bahasa Indonesia												
Relation to curriculum	Elective Course												
Type of teaching, contact hours	150 minutes lectures per week, 180 minutes supervised activities per week, 180 minutes individual learning per week.												
Workload	Total workload is 136 hours per semester, which consists of 150 minutes lectures per week for 14 weeks, 180 minutes structured activities per week, 180 minutes individual study per week, in total is 16 weeks per semester, including mid exam and final exam.												
Credit points	3												
Requirements according to the examination regulations	Students have taken Introduction to Cryptography course (MMM-4206) and have an examination card where the course is stated on.												
Recommended prerequisites	Students have taken Introduction to Linear Algebra course (MMM-2202) and have participated in the final examination of the course.												
Module objectives/intended learning outcomes	Upon successful completion, CO 1. Students are able to comprehend the cryptosystem and to construct the ciphermodel of a problem. CO 2. Students are able to comprehend the cryptanalysis and to apply for some populer ciphers. CO 3. Students are able to comprehend the Multicryptosystem and to build the cryptosystem of some famous systems. CO 4. Students are able to apply max plus algebra comprehend some kind public-key systems and to implement to solve some daily problems.												
Content	Finite field, polynomial ring; computational complexity; cryptosystem, Hash function, public key cryptosystem RSA,SHA, AES, El Gamal, Elliptic curve, Signatures scheme of RSA and El Gamal, randomness RNG, PRNG; Introduction to distributed ledger/block chain, post quantum cryptography, privacy preserving (zero knowledge); max plus algebra, max plus algebra cryptography.												
Study and examination requirements and forms of examination	The final mark will be computed from a proportional weight of assignments, mid examination and final examination. The final mark will be weighted as follows: <table border="1"> <thead> <tr> <th>No</th> <th>Assessment methods (components, activities)</th> <th>Weight (percentage)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Final Examination</td> <td>20 - 30%</td> </tr> <tr> <td>2</td> <td>Mid-Term Examination</td> <td>20 - 30%</td> </tr> <tr> <td>3</td> <td>Class Activities: Quiz, Homework, etc.</td> <td>50 - 55%</td> </tr> </tbody> </table> Minimum final mark to pass : 60 (C).	No	Assessment methods (components, activities)	Weight (percentage)	1	Final Examination	20 - 30%	2	Mid-Term Examination	20 - 30%	3	Class Activities: Quiz, Homework, etc.	50 - 55%
No	Assessment methods (components, activities)	Weight (percentage)											
1	Final Examination	20 - 30%											
2	Mid-Term Examination	20 - 30%											
3	Class Activities: Quiz, Homework, etc.	50 - 55%											
Media employed	Boards, projectors, computer.
